

Wenxuan Jiang

(+86) 135-0040-2091 | ppangxuan@outlook.com | pangpang-xuan.github.io | Born in 2004.02

Education

Northeastern University, China, B.S. in Software Engineering (AI Track) Sep 2022 – Present
GPA: 3.82/4.0 (89.1/100) *Shenyang, China*

Publications

KnowCoder-X: Boosting Multilingual Information Extraction via Code ACL 2025 (Findings)

Yuxin Zuo*, Wenxuan Jiang* (co-first author), Wenxuan Liu*, Zixuan Li, Long Bai, Hanbin Wang, Yutao Zeng, Xiaolong Jin, Jiafeng Guo, and Xueqi Cheng.

SlideCoder: Layout-aware RAG-enhanced Hierarchical Slide Generation from Design EMNLP 2025 (Oral)

Wenxin Tang*, Jingyu Xiao*, Wenxuan Jiang, Yuhang Wang, Xi Xiao, Xuxin Tang, Qing Li, Yuehe Ma, Junliang Liu, Shisong Tang and Michael Lyu

Research internship

Meituan (M17 Group) Oct 2025 – Present

- We are responsible for building Data-Centric's data-training-evaluation loop, exploring LongCat structure, evaluation strategy, and the impact of evaluation data on model performance, and participating in the construction of LongCat post-training and evaluation solutions.

Tsinghua University Apr 2025 – Jun 2025

Mentor: Xi Xiao

- We present the first benchmark with difficulty levels. We propose a framework that uses color gradient segmentation and hierarchical retrieval-augmented generation to generate editable slides from images. We also train a model on enhanced reverse-engineered data which can approaches the performance of GPT-4o.

Northeastern University Nov 2024 – Jan 2025

Mentor: Shuang Wang

- We use LLMs to generate Tabular Data. In the process of textualizing tabular data, we define column elements as Python Class for pre-training. During the column element sorting, we compute the data correlation between elements to perform feature-based sorting of the column elements.

Chinese Academy of Sciences (Key Laboratory of AI Safety) Apr 2024 – Oct 2024

Mentor: Xiaolong Jin and Xueqi Cheng.

- We proposed a two-phase training framework to improve Multilingual Information Extraction with LLMs. We produced an automatic pipeline for constructing NER parallel dataset and use them in the IE cross-lingual alignment. In the second stage, we conducted multilingual IE instruction tuning.

Projects

Your personal doctor bot. Jun 2023 – Jan 2024

Mentor: Yin Zhang

- We use voice wake-up, speech-to-text, TTS technologies to enable users communicate with models by speaking. We collect publicly available medical data and privately data to finetune our model. We use DPO policy by LoRA to align our model in multi gpus by deepspeed. Finally, the model inferences with using vLLM and RAG.

Competitions

China University Computer Competition - AIGC Innovation Competition National Third Prize

The 17th China College Students Software Innovation Competition National Third Prize

Personal Skills

Coding: Proficient **Python** and **C++**, and familiar with **Linux**.

Deep Learning: Master **PyTorch**, with expertise in using and finetuning **LLM**, particularly in **NLP**.

Language: Chinese (Native), English (Fluent), with an **IELTS** score of **6.5**.
